

Kill A Watt® **EDGE** Power Monitor

Consumers have depended on the Kill A Watt® and the Kill A Watt EZ for years to help them save energy and money. Now with the new Kill A Watt Edge it is easier than ever to gain insight on your consumption with the added experience of new features, for both the average and technically savvy consumer.

The Kill A Watt Edge has all the measuring capabilities of its predecessors. There is an added CO2 function so that you may calculate your Carbon Footprint, and it has a dual display that shows multiple types of information at once. It will even calculate the consumption and cost of your devices when left in standby mode. Once you are familiar with those costs they are easily combatable with the programmable motion sensor, that will shut off your items when you are not in the room. After time the Edge will learn your behaviors and tell you how much you have saved when your devices are in real "off" mode.

The Edge is also easy to read thanks to a tether that allows you to perch your meter nearby the item you are measuring without having to bend over or unplug the device to view data.

Get an Edge on your utility bill. Save power, time, and money with the Kill A Watt Edge

- Shows You The Operating Costs Of Your Electronics
- Eliminates Standby Waste
- Programmable & Easy To Use
- Calculates Carbon Footprint Savings
- 4 1/2 Foot Cord For Hard-to-reach Plugs

Specifications:

Model:	P4490
Power Rating:	120 Vrms ± 10% 50/60Hz
Power Consumption:	15 Amps, 1980 Watts, Resistive and Inductive 600 Watts Tungsten 1/3 H.P. 120 V.A.C.
Dimensions:	4.88" x 2.48" x 2.48"
Weight:	7 oz.
